

Facilities Maintenance Optimization Programs for Colleges and Universities

How can you create a healthier, more sustainable campus without going over budget?

Today's colleges and universities face a difficult set of challenges. Facilities managers must find new ways to operate more efficiently due to more restrictive budgets. At the same time, campuses are also expected to adopt new standards and processes for protecting health and the environment that are based on decades of research. To help address these challenges, Daycon—a leader in cleaning and maintenance solutions—has developed the Facilities Maintenance Optimization Program for Colleges and Universities.

Daycon can help your college or university operate more efficiently and maintain a cleaner, healthier, more sustainable campus.

Daycon can help you address three of today's toughest maintenance challenges.

FACILITIES MAINTENANCE OPTIMIZATION PROGRAMS FOR COLLEGES AND UNIVERSITIES

Increase
Operations
Efficiency

As the cost of education has risen, so has the pressure for colleges and universities to operate more efficiently. Many facilities managers have reduced spending on cleaning and maintenance supplies, but this only represents 7 percent of the typical campus facilities maintenance budget.

The Facilities Maintenance Optimization Program from Daycon includes a series of assessments and custom-designed solutions to help your school clean your facilities more efficiently—and keep them clean throughout the year—without adding to your overall operating costs.

Achieve
Sustainability
Mandates

While the public has grown increasingly concerned about health and the environment, schools are now required to meet mandates for sustainability and demonstrate compliance with best practices for creating a healthy indoor environment.

The good news is that operating more efficiently and meeting today's highest standards for protecting health and the environment are not mutually exclusive. Your Facilities Maintenance Optimization Program can help you do both through a combination of strategies, tools, resources and training through our partnership with the Building Wellness Institute (the nation's only accredited training program recognized by the Green Seal™ organization). Several universities and public school systems have achieved GS-42 certification.

Improve
Quality
Control

Your Facilities Maintenance Optimization Program also includes services that can help you measure and manage the quality of your indoor campus environment in accordance with leading national standards. These services include training, equipment maintenance, auditing and certification support.

To learn more about how your college or university can operate more efficiently and maintain a cleaner, healthier campus, please contact your Daycon representative or call our corporate headquarters at **800.394.0019**.

Daycon, founded by David Cohen in 1942, was built on three basic principles that hold true today. First, we are dedicated to customer service at all levels throughout our organization. Second, we are committed to integrity and respect for our employees and clients. Third, we maintain our social responsibility to the millions of consumers who occupy or visit buildings that are cleaned and maintained using Daycon products, equipment and value-added services.

The Facilities Maintenance Optimization program from Daycon includes strategies, solutions and resources to help your school operate more efficiently and create a healthy, more sustainable environment. For more information, please contact your Daycon representative or call 800.394.0019
